

WE: [0:00:09] Hi, welcome Vera, it is an honour to have you on the show.

VS: Thank you very much, it's a pleasure to be here.

WE: So, I think a lot of people are already aware of who you are, and today will be a special broadcast, also because we have this issue a lot in the in the media. And then of course, we are talking about the Jewish past, the Second World War, and the period leading up to the Second World War. But before we get into those comparisons, tell us, please, who is Vera?

VS: Who's Vera? Well, I was a child, when my family was deported. We were in Romania and we were deported to a concentration camp in Ukraine, where my father died. He died actually of typhus, which is an infectious disease that was rampant in all the ghettos and concentration camps. Understandably, since there was no hygiene and no food, starvation, and of course, no medicines. People, adults don't give children much credit for what children absorb. And I was very observant. One of the things that people can't hide is the zeitgeist, you know, of...when all the adults are living in fear and then terrified about something. Children pick up on that, even though the adults try to pretend that the world is different, when they speak to the child. So, even though I was only three and a half, when the world collapsed, but I had three years in the concentration camp. My father died before I was five. Then I had an odyssey, some 10 months in which I was a child in transit, without either mother or father. So, I had to fend for myself. One of the...one of the strongest lessons that I learned was how to assess people. Because I was little. First of all, little, but in the camp, I didn't grow very much. Again, starvation diets don't help growth for children. And so, and I was an only child, so I was not comfortable with my peers. I was being bullied and I always looked for adults who I thought I could trust. To take care of me. And I did. I was helped. I was helped by both Christian families and Jews. In Romania, you see...When I left the camp, I was sent back to Romania. The pretext was as if 'Oh it was by mistake that these orphaned children were sent.' That was not true, but what happened there –there was some sort of financial deal, in other words, ransom was paid, for some children. And this was in '44, when the Holocaust was really getting into high gear. This was the final solution. And they had intended to eliminate everyone who was left in all concentration camps. So, I was one of the bartered children, and, as I say, I learned to assess people. And so, now, with all the masks, distancing and distrust of other people, that little children are being exposed to, I really, I feel it's...it's really very unbearable, because they're being deprived, the little ones are being deprived of developing a sense of, you know... Based on people's expressions, you learn a lot. These are signs, this is more than language. And they're being robbed. They've been robbed, not only of actual schooling, but life experience with human beings.

WA: [0:05:02] Absolutely. So, we are...or a lot of people that lived through that period have a deja vu. But we also see that there is this consensus, consensus quote unquote, within the media and within the powers that be, that we are not allowed to compare.

VS: I know. And that, and that suddenly has brought out the fighter in me, because I have a right to talk.

WE: Exactly, and if....

VS: I have a right.

WE: ...I have some slides that I want to take you through. This was the first time I saw you talking in front of a rally and talking about medical freedom. Please tell us, how did you get involved in these freedom rallies?

VS: Because others aren't allowed to touch the Holocaust. That's how I got involved with this current outspoken public speaking and sort of really doing a lot of interviews. Because others get pilloried. And I...I feel my mission is to open up the chains that are surrounding the Holocaust, as if it was irrelevant to history, when it's the most relevant... most relevant event in human history, to today, is the Holocaust. Why? Until today, one feature distinguished the Holocaust from all other genocides, and that was the close involvement partnership, really, of the medical profession in genocide.

Medicine was weaponized from a healing profession into a murderous apparatus of the State, and that is what is happening today.

WE: Those are...

VS: I want to warn people, that if they do not resist, if they do not recognize, if they put blinders on them, because they'll be criticized, they will give up everything that people have fought for, for so many years, for so many decades. If we lose this war and this is not a battle, it's a war of survival. This is an existential war for the human species. They are out to eliminate most of the global population. This isn't just about Jews. It isn't just about Africans. It isn't just about single ethnic groups. It's about the entire human population. And people really need to understand that, to recognize, that today the unvaccinated are being treated as the Jews were in 1933/34. They're being hounded, they're being vilified. Jews were accused of being spreaders of disease under the Nazis, and now the unvaccinated are being accused of spreading the virus. It's a lie. It was a lie then, and it's a lie now. And the only way to arm yourself with the assault, and it is an assault, it's a digital assault, is by recognizing those parallels and putting it out in the open, so that more people can see: "Oh my God, this is what they're after!" Yes.

WE: [0:09:36] So, then I did some research, but you have been outspoken on this subject ,for a much longer time. So I guess it was also natural for you to speak out. Tell us something about...because you've got a whole biography in Nature, in 2008?

VS: Yeah. I got involved with the psychiatric profession, particularly the increased use of psychotropic drugs. The drugs are being used essentially as restraints, chemical restraints. These drugs do not cure anything. These drugs do not help it. Most...they make groggy, they really weaken you, so that you can't...you don't have control then, of your faculties. And the thing about it is that...psychiatry, in psychiatry, the doctors do not have any respect for their patients. It disqualifies, because they're crazy. In psychiatry, the government helps to enforce forced drugging. Forced drugging, now we've got forced vaccination. Psychiatry...psychiatric drugs are a huge, huge, huge business. Now it's overtaken by vaccines.

WE: And it's all of the same players. And what really triggered me, was that part about the informed consent, that...already here they were trying to get around it, with waivers of informed consent. Can you tell us something about that?

VS: Well, that's the point. As I said, psychiatrists disqualify their patients as full human beings. So therefore, they feel entitled to do and prescribe whatever they want, without the consent of the patient. Now, there are all too many cases of patients being badly harmed. Some of these drugs, for example, cause diabetes. They cause all kinds of heart problems. They cause what is called tardive dyskinesia, which is involuntary muscle movement, which is very, aside from it being a debilitating, it's also...it makes you into pariahs. Nobody wants to be near you, you've got all kinds of quirks, and to them, that doesn't matter, as...as long as they swallow the pills.

WE: Yes, so it's more focused on not...or trying to solve the problem for the outside, instead of for the patient

VS: Correct. The patient doesn't count. And they do it en masse, and they...also what they've done is, they kept...they increased their customer, their client base to children: children who misbehave, who may be disinterested in what the teacher is talking about. So, now children are being drugged and the government will come in and threaten to take the child away if the parent refuses to obey doctor's orders. The minute you have government involved in medicine, watch out! It's no longer medicine; it becomes a government...

WE: [0:14:02]...mechanism of control.

VS: ...mechanism, exactly, control. And they've used it that way, and they also introduced...now another clever thing they've done, which was then copied in vaccines, and that is to use drug

cocktails: multiple drugs at one point, swallowed at the same time. What does that mean? If every drug has side effects, every drug, and it used to be, way back, that every drug used to carry the skull and bones to warn people: this is poison. OK? And the point was that it was understood that medicines were poisons, but the doctors had the special knowledge and art to determine the right dose for the individual so that they would be not harmed and would be helped. They did...they did away with the skull and bones. And some of the drugs actually, especially those that children are supposed to take, they they they make it look like jelly beans. So, when you mix a bunch of drugs and there are bad side effects, like the ones that I talked about, which company do you blame? Each one will say: "Not my drug, it's his."

WE: And we see the story repeating itself, because last week I covered an article that was about the heterologous injections, the mixing and matching, and the destroying of the control groups, trying to inject everything and everybody with multiple brands. So, we are back to the story that you just told us.

VS: Absolutely. It follows the same pattern, because this is a business model. This is not a medical model. Medicine has wound up being the prostitutes of the pharmaceutical industry. It's that bad. It's that bad. It happens in other areas as well, I mean, the Eli Lilly once came out with a with a drug for heart attacks that was like \$2000 a shot, when it turned out that plain aspirin was doing the same thing. And...

WE: Also, a very similar story to i-v-m..., today.

VS: Yeah. So, there you go. I mean, these things are not new. It's just that now it's being...it was launched on a much, much bigger scale. Now the whole...they have the entire global population in their radar, you know. It used to be the separate groups; they went one after the other. AIDS was a big... AIDS was a huge business: also all multiple drugs, all...all mixed up. The other aspect...is...you see that we talk about informed consent, this is...this comes out of Nuremberg. And Nuremberg comes after the Nazi atrocities became public in a court of law. And so, the Nuremberg Code was formulated, so that it...that medical atrocities, which means: medicine that you do not give informed, voluntary consent to, has no place in the civilized society. And they wanted to make sure that atrocities, such as the Nazi doctors committed, would never happen again. We are now at the gateway of it happening, right now.

WE: [0:18:08] Exactly, and that is... When you co-signed the letter, that we delivered for you at the EMA, of course we got a lot of response, worldwide I would say, so that was very...very encouraging. But then we looked at the reply after a few weeks, and I want to point out this first sentence: "As a preliminary remark, the EMA finds the comparisons you make both inaccurate and inappropriate." As if you are not allowed to speak about your past and about your déjà vu feeling.

VS: Well, this is to desqual...this disqualifies us, as survivors. That's the first thing. How dare they?! Who has the moral right to disqualify people's experience. They're doing it also now with those people who are harmed by the covid injections. They're not allowed to speak, they're disqualified, too. What kind of a society then are we going to? Well, I know what kind we're going to.

WE: Yeah...

VS: I want to stress, this is from my research obviously, not...not from my direct experience, but at the time, during the thirties mostly, and even quite late, nobody believed that Hitler meant what he said he would do. And they were wrong. So, we are told: Oh, no, no, this is for our own good. Yes. No. None of the restrictions – none – that have been taken since March 2020, have been for our good, or in any way justified by public health, or medicine. None of it. They did things in order to get us conditioned, psychologically conditioned. To trust no one, except those that are giving us the order: the experts – the...the government ordained experts. It's something like a religious sect, really, that's what...the way it is...

WE: It's very literal actually, a religious sect, it is called the One Health Alliance or the One Health Platform, and it has their own symbols, so it is a sect. So what I find startling, not only the...the

disrespect towards the Holocaust survivors, but also the blatant lies: that once the regulatory authority has granted the marketing authorization for medicine, it can no longer be considered investigational.

VS: That...

WE: There is no marketing authorization. There is a conditional marketing authorization, so this is playing with words

VS: Well, they do it...

WE: Yeah.

VS: Look, it's very actually...it's very clear. You know, the FDA did not license this drug and everyone followed whatever the FDA does. So, FDA, I mean the authorization, the emergency use authorization is only allowed if there is a real pandemic. A pandemic...the definition of a pandemic, until the World Health Organization changed it all of a sudden, was the number of deaths. It was defined by the number of deaths. It never reached...CoVID-19, never reached that...that platform, so they changed it and the FDA use the WHO as the justification. However, there was...there were a few other problems, which the FDA didn't want to know about, didn't want to see, and that is: by US law you cannot market under authorization... emergency, unless there is nothing else available that could be used. And we had plenty of drugs that are fully FDA-licensed, that have a safety record for decades, that doctors have used for all kinds of diseases for decades. And this is not unusual; a lot of drugs can be used for more than what they are initially approved for. That's part of medicine: trial and error, trial and error, and finding all sorts of new uses, reuses. Doctors have been, and continue to be, forbidden to use curative medicines! Why? Why is government interfering with the professional judgment of medical doctors?

WE: It is a very good qu...

VS: That is something, the way, that;s something that the Nazis didn't do. That is something that happened only. Have we reduced doctors into yes-sayers, into stenographers?

WE: [0:24:021] It seems to be the case. So, after that reply of the EMA, we filed charges, in a name of a few organizations, and you were one of the co-signers as well, of this letter. Up until this day, we have not had any confirmation of the ICC, which is peculiar, to say the least. But of course, the ICC is part of the U.N., like the W.H.O., so I'm not sure that we will ever get a reply of them.

VS: Well, what this shows, this whole thing, what it shows really, is that we do not have a legal body that has any sort of moral standing, whatsoever. We have dictates and we have consensus, and we do not have morality. And without morality, we don't have a civilized society.

WE: Yes, and this, I think, is the most important part, and these letters are on our website, if you will want to read it – also, the Dutch translation – but: “History will not look upon you kindly if you fail to do your duty. Know that your eyes and those of the peoples of the world are upon you – the responsibility lies with you. You know what is happening, you have the evidence and now you must act.” This was the..the letter that was sent to the EMA and to the ICC. I'm afraid that it will be in vain, for now. But with every dictatorship, we see a rise and a fall, which will inevitably fall. So now in Holland, especially this part, is really becoming mainstream, as some members of Parliament have told this, almost this exact, phrase to other members of Parliament, which are proponents of the medical experiment and the forced vaccination. Also, some rabbi in Holland are speaking out and making the same comparison; “People beware, what is happening now we have seen before.” But then what we see, is that these people that are brave enough, like yourself, to speak out, they get a lot of pushback and backlash, not only from the media, but also from politics and from the own Jewish communities, so they say, or the Jewish organizations.

VS: OK, I have some...like everything else...as I indicated, way back, as a child, I learned how to assist individuals. One of the things that I do not...look on as really the important, is groups. And especially groups that essentially are vested interest groups, institutions, whatever, it doesn't have to be government, non-profit...they're all, they wound up being beholden to their payers. And during the

last 20 years or so, maybe more, almost...almost all institutions and organizations and non-profits have been bankrolled by those who then dictate 'what'. They go along with, they support the policies that these players, like Bill Gates – he's been bankrolling, for example, media for decades. He started to fund journalist schools, way back, he was the only one, at that time. Now what happens? Of course, it was brilliant, because they then are trained. By the time they get to CNN, they already know what they're supposed to do. They're already, that's it! So that's why you have the entire media, and the social media...it's...they're all singing from the same script. You can click the channels one after the other, it's the same thing, the same script is coming up.

WE: [0:29:07] And this is also reminiscent of Goebbels, for instance.

VS: Absolutely, that's the Goebbels thing: that you have one storyline, one narrative, and it's dictated by the state, it's supported by everybody else, and that...and you keep on repeating: repeat, repeat, repeat. And of course, that's what people have gotten used to. When they were locked down for sure; all they did was glue to the television: news, news, news. And what they hear in the news, all the time: death, death, death! And it was all made up. It was all made up! When we heard about hospitals being overrun, that was nonsense. You know, at the beginning there, when there were many Covid cases... but... At that time, it was President Trump. Whatever you think of Trump doesn't matter, but he did give them a big battleship to be a hospital, and to add a hospital, and the Javits Center, which is a big commercial...trade shows there, was turned into a hospital. And they never use them!

WE: Same story in Holland.

VS: That's how crowded they were.

WE: Same story all over the world.

VS: But the propaganda...they showed...as if they had to do tents in Central Park. Please! You see, at the time, I...you know, none of us knew, after all, what Covid was. But there were a few people in New York, who went with the camera to some of the hospitals, and they photographed: empty, empty, empty, empty. There were a few hospitals that were overrun and all that, but that were purposely...everybody was sent to them. And the people died because of bad treatment, not because of the virus. They weren't getting treatment for the virus. They were being told to stay home until they really got bad symptoms and then to come to the hospital, and then they put them on ventilators and killed them.

WE: With Remdesivir.

VS: That was mass murder.

WE: Yes.

VS: There is another thing, and I do want to say this, I don't want to forget this, because this is a direct parallel. The first victims of the Holocaust were not Jews. They were German infants and children under the age of three. They were disabled in some way. Doctors selected each child, decided whether they would be killed, medically murdered, or whether they'd do an experiment, or they would be OK – sent back home. Of course, the parents were lied to. Children were forced out of their parents. They were told that the children would get special treatment to improve their condition. After they were murdered, parents would be given false death certificates, signed by medical doctors, that the child died of natural causes. End of story. The next group were the mentally ill, and then the nursing home residents. They did this...the justification was 'public health'. First, they wanted to cleanse the genetic pool. The Arians must be superior. And to get rid of economic burden, and they have lots and lots of propaganda about this heavy burden of all these unfit. Worthless eaters," is what the Nazis called them. In March 2020, we had a replay of T4. T4 was the euphemism, the code for this murderous...medical murder branch. In March 2020, the wealthiest countries in the world: Western Europe, United States, Canada, Australia, everyone issued medical murder orders, essentially. They condemned the elderly in nursing homes to death. They ordered hospitals not to treat them. To send them to nursing homes, where they were totally

ill-equipped. Either...neither to treat anyone who was infected, nor to stop the spread of the infection. As a result, the majority of deaths from Covid were the elderly. But this was pre-planned, because how come every one of the Western European countries followed exactly the same...

WE: [0:34:37] Yeah, for the people who are not aware of this story, look up, Governor Cuomo of New York. He has been exposed to send sick elderly people to these nursing homes to infect other people. This is not a made-up story, it is in the mainstream media.

VS: In fact, he...he did it partly at the behest of New York State Insurance. Companies who were his main contributors to his elections. Before he issued the murder order, he....he...immu...he gave complete immunity to both hospitals and nursing homes. And he said, he predicted: "This virus in nursing homes will be like fire through dry grass." Before he issued the murderous order, he predicted it would be like fire through dry grass. So yes, this is premeditated murder. He...during the...about a year, he was giving daily briefings, and for that he got an Emmy Award from the prestigious media. And he penned a book, which a lot of his staff helped him write, during all this period, for which he got \$5 million. So, he walked away, I mean, he was forced, finally, and he was forced out of office, not for his mass murder. He was forced out of his office for groping some of his women co-workers.

WE: That is also very typical. We see Benjamin Netanyahu forced out. Berejiklian in Australia, Kurz in Austria. We see all this corruption scandals about minor stuff.

VS: Yeah.

WE: They walk away, they did their dues...

VS: Yeah.

WE:... and they're not prosecuted, yet. But I'm saying 'yet', because I want to take you to this one, and this gives me a little bit of hope. Can you please explain to the...to the viewers what we're looking at?

VS: Well, we're looking at a decision of a rabbinic court, in New York, which...three rabbis signed it. There were quite a few other rabbis present, and the entire...the testimonies that they got – it's eight hour video...

WE: ...of medical professionals.

VS: ...of the top, the top world renowned medical professionals, yes. And the inventor of the mRNA, Dr. Malone, Robert Malone, he actually flew in and sat down with the rabbis at the table, and told them he will be there as long as they want him to talk, and he will take all questions, whatever. And they did. They had a lot of questions. A lot of questions came from all the rabbis. And, after they heard all the different testimonies and left them also with a huge bibliography, some 1200 scientific articles for them to look at, they came out with their verdict. And it begins with children: You may not use these injections on the children; you may not on adolescents; you may not on young men and women; you may not on pregnant women. It goes down the line, and then the elderly...[they] said, well, more information is needed, but for the sake of caution: Do not vaccinate. Which means: Jews are forbidden to be vaccinated with this Covid injection.

WE: [0:39:08] What legal ramification does this have? Is this only a symbolic gesture? And I believe this is the only Halacha court, outside of Israel?

VS: Well, in Israel there was one, too, where Dr. Zelenko talked to them, and I don't know the exact decision, but I mean, it's probably similar. There is also, no, there is also...there are a hundred and fifty rabbis who signed a petition, also, against it, and that's posted on the website. So, what does it say? Well, look, religion has different standing in different countries, I know. In the United States, religion has the strongest legal standing. Actually, you know, the United, yeah, the United States is very serious and many of the cases that have been won, are about religious exemptions. This

provides absolute document for religious exemption – a Jew who doesn't want to be vaccinated, can point to. Can't do it.

WE: And it's not only for Jews...

VS: No!

WE: ... because these testimonies were scientific, and they came to a conclusion also based on the scientific evidence.

VS: Yes, but these rabbis feel they only have authority, you know, over...

WE: Yah.

VS: ...over Jewish people. But this is just it, right. None...nothing to do with medicine, or science, or...you know, anything that's...that is not religious; is meant only for, you know, one religion, or whatever. That's...that's nonsense. It's just, which ones are willing to consider, deliberate, and decide? Now, I want to...you said something and...OK, you're getting to that, which is similar really, about those Jewish institutions, groups, whatever, right, who are the guardians of the holy Holocaust? Well, I'm there to challenge that. Because, there...it's like a...it's a reaction that has been sort of trained, you know, as if they own it.

WE: Well, that...that I see a lot: the ownership of...of...of pushing people out, and I don't know, we decide who can compare the Holocaust to what, and it's...it's...it has always baffled me, but now, specifically because we have some Jewish people in our organization, there are people like you, speaking out – as if you are not allowed to speak about your own past, your own experiences.

VS: [0:42:10] Well, I...I'm...this is why I'm taking such a strong public stand, and really in very many venues, very many interviews. Because I believe that the Holocaust has a very important relevance to today. And if you put it aside, first of all, as if it's just Jews – no, it wasn't only Jews! There were many millions, who were killed. Jews were the primary target, but that was the beginning. Hitler had bigger plans. He just didn't live long enough to realize them. Today we have Klaus Schwab, with his plan of the Great Reset, and that's meant for all of us, that's meant for the whole globe. This time they got cleverer, they didn't pick on one group, they didn't go after the Africans, or the Jews, or the Catholics, or whatever. No, they decided the entire human race is their playground, and they decide who shall live and who shall die. And, by the way, the plan for those who shall live, is as slaves – as digitally controlled slaves. Now I'm appalled at Jewish institutions, like in New York, that required the IBM green passport. And, you know, in the UK there is, I forgot the name of it, but that's the Quandt family and these are the relatives of Joseph Goebbels, enormously wealthy, and they...yeah. And this...so, the connection between all Nazi families and the current ruling elite is one uninterrupted thread. And for those who don't know about IBM and the Holocaust, they should read a book by Ewin Black, Edwin Black: "IBM and the Holocaust". The Holocaust would not have been accomplished to the degree that it was. Six million Jews would not have been slaughtered, without IBM. Maybe a million.

WE: Yeah, they made the punching cards, so everything could be like a machine. Everything was kept on records.

VS: The records were there. The tracking, the tracking. OK. And they also controlled the train schedules, to ensure that one train came, the other one left. Everything went fast, fast, fast. Now we have warp speed vaccines. Fast, fast, fast, fast. Any time that happens, something should go off in your mind and say: "Danger! Danger!" So, and IBM continues to be involved in tracking and surveillance, they work hand in glove with the CIA, with the military intelligence, that's their.... And the same thing with the Quandt, and all of them. Look, Silicon Valley is now the main facilitators of the digital Holocaust, which is what is planned. They pla...they already have the technology to put chips, tattoos...OK, Auschwitz they had tattoos. Bill Gates already developed microchip-tattoo. The current surveillance is far, far more sophisticated, far stronger, because now they can survey 24 hours a day, seven days a week. You cannot have a dream, without their knowing what you're dreaming about. It's that intrusive.

WE: Absolutely.

VS: That's to make sure that you're obedient and...everything: your bank account, your checking account, your...whatever. It's all controllable, through digital surveillance.

WE: [0:47:04] I want to go a bit further, and this is hard to read for a lot of people, I think. This is an email you got, because you were speaking out. And I'm showing this, because I think it is important to show the ugliness of the other side trying to suppress the story and really hitting below the belt.

VS: Well, no, what it shows is their Nazi ethos has not been buried.

WE: Mhm.

VS: And the only difference is that those who are being accused now of being Nazis are the ones who are speaking out, in order to prevent another Nazi regime.

WE: Yeah, and that is also the doublespeak we constantly see, that the people who are raising the alarm bells are called Nazis, but they are actually speaking out against the atrocities.

VS: Exactly, exactly. Yeah, you conflate the message that way.

WE: Yeah. So then, this one to me is an admittance of guilt. So, we have a super-fast approval, which is not an approval, but a temporary conditional marketing license...

VS: Yes,

WE: ...in just 10 months, but they need 55 years to sort of...

VS: To hide, to hide the data. To hide what they're...what they're hiding. Look, I mean, I don't understand...people who have more than fourth grade should be able to understand that if...and, but do follow: it isn't even Pfizer or Moderna who's asking, it's the FDA who's asking for their silence. What does that say?!

WE: They're covering their own crimes...

VS: and and they are in partnership, you see, you cannot, you cannot separate. They have all financial and criminal complicity, together. The evidence that they want to hide, is what the companies want to hide. And they did get the evidence it...among whatever documents were submitted, and now they want... Only the public, we, who are being bombarded to get this into our bodies, we're the only ones who are kept ignorant, and they want to do it for two generations,

WE: Which is kind of amazing, because earlier this week, or two weeks ago, we had this publication, I think the 2nd of November, in the British Medical Journal, that fraud was committed during the clinical trials, and this was the only one we know of, yet.

VS: Mm-Hmm.

WE: What that means, that, if we do this, we cover it up. We cannot find out where...if there is more fraud. So, this is amazing, and to me, it's really an admission of guilt. And it also shows that the legal system is broken, that they are colluding with this to cover it up.

VS [0:50:26] Well, we don't know yet whether the judge dares do this, but this...this is something. Everything about this assault on humanity goes further than any other preceding, nefarious regime, ever tried. I mean, it really is total. They want essentially to have a complete blank slate.

WE: Agreed, it is.

VS: Nothing is showing.

WE: Yeah.

VS: That's, that's what the Great Reset is, yes. You bury the entire past civilization, everything. People need to understand really how far this band...and they are conspirators now, let's be serious. The word has been besmirched as if it's, as if it doesn't exist, as if such things don't exist. Oh yes, they do. This is a conspiracy and it's a conspiracy of an elite, the wealthiest ever elite, for whom power... There's no end to how much power they want. They want to be God. They want to replace God. And I mean 'God', whatever, however you look at it, because that includes nature. They want

to improve nature. Nature's no good. That's why we need genetically modified foods, and now they want to do genetically modified people. To be obedient beasts, robots.

WE: Cattle. So, I have one or two more slides. This came out today, and this article of RT is about the legal system and it had...took 20 years to overturn it and then another more, 20 more years, to clean it up to get the Nazi ideology out of the German legal system. And I'm showing this because, this is where... these people facilitate the courts, is where maybe the...the biggest problem is, and once we overturn the regime, I think there's a lot of work to be done to clean up the system and to build a new.

VS: There is a, there was a heroic Jewish lawyer, Fritz Bauer, in Germany, who tried, exactly, he tried for years to get some of the legal people, the judges, on trial and, you know, Nuremberg type of trial, and a few he did. And then eventually he was found dead in his...in the bathtub. There are lots of deaths that occur with various people involved in these...in the attempt to find the criminals, to make them accountable. And many have been, you know, mysterious deaths. We also have some mysterious deaths of heads of state who did not go along with the vaccine orders.

WE: Haiti and Tanzania are probably the most famous ones, but I think there's...

VS: There are others, there are about four or five. And that's...that again provides a hint as to how come all heads of state fell in line, just like that. My suspicion, this is not...I don't have yet...maybe it's part of that cash, that's the 76 years they don't want to divulge. But, you know, I see it as it's a carrot stick kind of thing. It's both bribery and I...and this kind of bribery is substantial bribery, we're not talking about a million or two, we're talking about a few hundred million. For each one. And some of them, I suspect, aren't getting all their money until...per head. That's why they're so anxious to get every one of us. They probably got, you know, the beginning.

WE: It's very clear...

VS" A lot of contracts are done that way, right?

WE: Yeah, it's very clear..

VS: Upon delivery.

WE: ...you have to get a target at a certain...yes.

VS: Right. And the other is to threaten. And those mysterious deaths helped to convince.

It's...otherwise, you cannot really explain how it was that everyone told their people to lock down. Everyone mask dich [??], even though they at first admitted masks won't do anything. 'Course not. Oh, but they do do a lot, today. Psychologically, it's..it's a weapon. I regard the masks as the yellow star. Because masks have a tradition. they are demeaning. They are disrespectful of your humanity. They say, you... you know, you're not...you're not a free human being.

WE: And you have to be obedient and you have to shut up.

VS: Yeah.

WE: [0:56:05] And you have to be scared of the other and you not allowed to make contact and all those psychological parts are added...

VS: They're deadly, because they're very effective. Look, I mean. The mind control experiments that were done at the behest of the CIA, and they were done at many, many, many institutions, many hospitals in the United States. You know, they wound up leading to Abu Ghraib. Torture. That all started in Dachau. And the United States brought over more than 1600 scientists, Nazi scientists, Operation Paperclip, and they trained American doctors and psychologists how to do this stuff. So, they've been training for a very long time. And now they're doing it, OK? You know, and it used to be it's to... for the enemies, right? For terrorists, for this, that. But now it's the little children, right here. Your own distor....you know it...it shows how insidious you allow this to be done, at all. Gain of function. What's a gain of function? Biological warfare experiments. It's illegal. It's illegal internationally, it's illegal by United States law. And I'm sure it's illegal by Netherland law, too. I mean, everybody has something about they're not supposed to be using biological weapons.

WE: Well, it's funny that you mention it, because the city where I am, Rotterdam, is one of the cities that was involved. Yeah, you have Chapel Hill, North Carolina, Rotterdam and Wuhan. Those are the three main institutes in this corona pandemic hoax.

VS: I mean, that's just it. You see, what I also want to bring across to people that they need to understand, although I certainly read and listen to experts...to me, an expert is somebody who is not involved in any way financially, has nothing to gain. And the only experts who have nothing to gain, are the ones who are criticizing, because they are telling the truth. They don't have money to lose if they tell the truth – their jobs, yes, and they're getting pilloried, but the point is they're not working for pharma and they're not working for the government. Those two, you can't tell the truth, because you definitely get fired, I mean. So, while we listen to them, nevertheless, each one of us was born with the right to free will. That's a God given right. Freedom to make your own judgment. And when people give that up, they're really giving up the most important part of their humanity. That's the difference between the animal, who can be shepherded around, and every human being. And I know that many Christians criticize me for what I'm going to say, but I say it because I... it's the truth. During this time during this Covid thing, I found...I discovered that I have a heroin. Not a hero. But a heroin and that heroin is Eve. The biblical Eve, she disobeyed God in order to have knowledge. And I think that's a pretty good heroine to have. But as I say, I get criticized and I've explained my reasoning and all that, but I think people should think about it, because...

WE: I think it is very similar to...

VS: ...really, God, you know, even though in most of the Bible, it's: you must obey, obey, obey. No, but there are key stories, where you are supposed to not obey.

WE: Yes.

VS: Eve is a major one.

WE: [1:00:33] My favourite quote is from Buddha, he says: Doubt everything, find your own light. And I think that is really important to be an autonomous responsible person: to have your own intuition and to look at facts and opinions and the outside world, but always take your own moral compass into account.

VS: Yeah. And also your instinct, your human...I mean, we really...one of the things that makes human beings different from others is, we're unpredictable and this is what they're trying to eradicate from existence. They can control groups, they can control heads of state, but they can't control every one of us. And, believe me, they have spent a lot of time, a lot of thought, how to get at us. And they can't. One of the examples is there were, what...in Israel they're called 'righteous gentiles', OK? It's a special category of people who essentially maintained their humanity. They remained...and they...and many of them risked their lives to help Jews, to hide Jews. And so many scientists, psychologists, anthropologists have tried to find out what the unifying...what unifies these people, what is different? They can't. Nothing...has nothing to do with education, has nothing to do with religious...nothing. It's just they...and some of them sort of just said: "I had to!" What do you mean, you had to? Everybody else didn't "had to", but you had to. That's...and that's, that's the beauty of human beings. That's where the, you know, a kind of a god comes into play, because God, yeah like the expert view, you know, the ruler... But no, we are supposed to use our own parameter, our own moral indicator and whatever. And sure, we will make mistakes, if you live long enough, you make plenty of mistakes, but you'll be responsible for your mistakes and you learn from them. Whenever you defer to authority to make decisions for your life, when it's wrong, when it harms you, when your child loses their life because of the advice, they're not accountable at all. They're never accountable for the mistakes that they make. Here you have Anthony Fauci. He's never made a right decision, ever. It's all about how to kill people. Gain of function, just think of the euphemism. Of course, sounds very... 'gain of function', what could be wrong? You know what could go wrong? It's essentially to make whatever pathogen or virus or whatever, that you could lay your hands on, more lethal and more..

WE: Yes..

VS: I mean, what could be worse?!

WE: [1:04:17] Well, they are trying to infect us with fear, basically. But what I see actually gives me a lot of hope. I see people of all denominations coming together and trying to support each other and effectively resist cooperating, all around the world. I have never, ever in my life had so many meetings with people that I agree with, and that I respect and that I have wonderful conversations with. So, I am quite optimistic for the future in the mid-long term. But I think it will first become a hot and dark winter.

VS: Well, I think there are some interesting signs. One of them is both in the United States and now in Austria: that police and military refuse. Now, I understand that they even...one of the tactics that they use, is to get outsiders to be the police and all that. I don't know how long that... People will have to understand, we are the many. We are the many. They are only a small band, and they only have power if we give up our own. If we don't give up our power and say: "No, you... no matter what." OK, go ahead in front of everyone, you know, force. Go ahead. How will that.... People need to understand that you sometimes have to risk your life, because it isn't worth living, I and...I would, I would not, I would not go back to living those three years.

WE: Absolutely.

VS: That's not...that's not living. And it'll be up to everyone, now. And I also want to stress that the Holocaust survivors were rescued. There were military rescuers, OK: Soviet Union, United States and the United Kingdom, they rescued the rest of Europe and its survivors. This time there will be no survi...nothing, no rescuers. No rescuers, we are our own rescuers and our families' rescuers. And if people...I really don't have very much patience with the parents who are delivering their children to essentially the moloch, you know, that was the, in prebiblical times, that was the one they would give them... That's what they're doing, because they're shielding themselves with wilful ignorance. Wilful ignorance by an adult is a sin. I don't think there's anything worse than to deliver your children to what you don't know, even what. Really, at best you don't know. You haven't informed yourself. You're just to... look, I mean...Russian roulette with your child's life? What have you come to? This is how they win. If you if you give up your right as a human being, that's when they win.

WE: [1:08:00] And that is why we always need to speak out and try to inspire and activate other people to do the same. Because you're absolutely right, the many will always win, truth will always win, with one caveat, that we need to stand up and we need...

VS: Yeah, but we want less casualties, you know. This is a huge, huge...the stakes are just tremendous, have never been bigger. And the...and they don't need crematoria, they now can do it, click click, from remote.

WE: Well, let's end on a positive note. I want to thank you a lot for the interview. Hopefully we will meet again, and hopefully also physically, one day, if it's possible again. Please keep speaking out and keep giving your opinion, especially about the Holocaust and the comparison with the period before that. Because it is so important that we take the lesson from that period. If there ever was a time, I think this time is it.

VS: I do I agree. This is why I'm doing this. I mean, you know most...But I'll tell you, most people my age, you know, are bored, they're lonely, and that's true. I don't have enough hours in the day. I'm just...so, for that, it's, you know, it's stimulating. And I meet a lot of young people. And I do hope that we end this sooner, rather than later. I would, really, I don't want to see millions of children dead.

WE: Thank you very much.

VS: It will be thousands, because they are rushing them...really, it's like a conveyor belt.

WE: Absolutely, and...

VS: They need to start thinking what happens in a slaughterhouse? You know, you send them and then the conveyor...that's how they have...to have nightmares. Maybe then it'll wake them up, that, no, you do not deliver your children.

WE: That's a strong message.

VS: Well, you know, look, at that time many parents let their children go, to save them. And don't think that that was easy, or that it...that the children ever healed. No, I've talked to enough, and so I know. That was not just: and they lived happily ever after, no. That there are scars that are forever. And I really hate to think, you know, the German third generation, when they asked their grandparents: "Where were you? What did you do?" How will people, now, sending their children... how will they feel, if there are grandchildren? You know, how will they answer? Then you have to think of, really, consequences, not just immediate: "Oh, you know, I need the green pass, so I can go to the bar, I can go to the this and that...". There are more important things.

WE: Absolutely. Thank you very much.

VS: Thank you.
